

Martin Quadra-flex® Couplings... A More Perfect Union

- **No Lubrication**
- **No Maintenance**
- **No Fooling!**

Martin offers industry a full line of flexible couplings. You get 4-way flexing action that absorbs shocks and vibration, swallows angular and parallel misalignment and end float. Because quadra-flex uses a torsionally soft elastomer in shear design, it will wind up 15° at rated torque. This provides 3 to 5 times more torsional flexibility than other leading types of flexible couplings...protecting valuable connected equipment from shock and vibration.

There is no metal-to-metal contact, so there's no need for lubrication and maintenance. Easy to install. Operation is noiseless and clean.

All components, including a new, superior thermoplastic injection molded elastomer sleeve, are manufactured by Martin. That's what makes these flexible couplings different from all the rest. Better quality. Better balance. Better value.

Quadra-flex couplings. The finest general purpose, motor speed couplings on the market today. Sold through the best distribution network in industry. Learn more about a more perfect union.
